

Prime Resins, Inc.—COMPANY PROFILE

For nearly 3 decades, Prime Resins, Inc. has been formulating and manufacturing epoxy injection resins, polyurethane chemical grouts and polyurea coatings for concrete restoration and infrastructure repair. With headquarters in the Atlanta suburb of Conyers, our laboratory and 48,000 square foot production and warehouse facility are tightly integrated to maximize innovation and optimize service to customer.

Prime Resins' core customers are concrete repair specialists, utility contractors, municipal and county governments who maintain public and private infrastructure. We partner with specifying engineers and building material suppliers to educate and ensure successful project outcomes. Because successful customer experiences are the only thing that matter, our toll-free technical support service is available 24/7. This industry exclusive service is staffed by knowledgeable technicians who provide product and application advice. Ingenuity™ is our problem solving system that removes guess-work and injects experience into decision support. Through our Innoversity™ education initiative, we conduct training seminars, webinars and other on-line, on-site learning opportunities so customers, partners and specifying engineers gain insight into the right epoxy and polyurethane products, tools and techniques. The Prime Resins brand stands for more than just infrastructure repair. Our promise-to-customer says it best, *“Do it Once, Right and For Good.”*

Prime Resins produces a variety of formulations for each type of epoxy, polyurethane and polyurea resin. Products are packaged in containers ranging from convenient "Quick-Mix" cartridges to drums and plastic totes. This means our distributors can supply the required quantity of the most appropriate product for nearly every application. We also manufacture pumps, ports, and other application accessories designed to save time and minimize the amount of material needed to complete repair projects.

These are a few compelling reasons why engineers specify, contractors swear by, and government agencies align with Prime Resins. Need more?
