

THE EQUALIZER

Impingement Style Polymer Foam Application Gun

Patent Pending

USES:

- Concrete Leveling –slab jacking
- Void filling
- Soil Stabilization

ADVANTAGES:

- No internal moving parts
- No O-rings
- Versatile -Three injector sizes for various viscosity materials and ratios
- Quick and easy rebuild
- Equalizer Flush (Water based Solvent Purge System)
- Button head port connection system for soil grouting applications
- Screw on port for concrete leveling applications
- Equalizer Flush doubles as a stain preventer

THE EQUALIZER - POLYURETHANE FOAM GUN

Conventional Impingement guns do not like back pressure! Too much back pressure and the gun crosses over resulting in labor intense gun rebuilds, down time, replacement parts and in some cases lost hoses. Back pressure at the spray tip is inherent to leveling slabs, void filling and soil stabilization.

The Equalizer Gun is the only impingement gun engineered to handle back pressure induced when conveying 2 component polyurethane foam to lift slabs, fill voids, and stabilize soils. Aside from the flow control valves this gun has NO INTERNAL MOVING PARTS, and NO O-RINGS....really, which makes rebuilds quick and inexpensive. The Equalizer Gun utilizes a unique environmentally friendly water based solvent purge system that doubles as a concrete stain preventer.

COMPATIBILITY:

The Equalizer Gun is compatible with most hydraulic, pneumatic and electric proportioners.

REQUIREMENTS:

A small electric airless sprayer like the Titan Advantage 100, Titan Impact series, or similar sprayer, is required to pump the flush to the gun head.
